TEST CONDITIONS

Data was recorded during steady-state rated engine speed (\pm 25 RPM) with full load (\pm 2%). Pressures, temperatures, and emission rates were stabilized.

Fuel Specification:

Natural Gas: Dry gas as received from Supplier (1000 BTU/SCF).

Propane: Meets the requirements for Commercial Grade Propane under the ASTM D1835 Standard

Specification for Liquefied Gases

Fuel Temperature 60 ± 9 °F at Flow Transmitter

Fuel Pressure 14.73PSIA ± 0.5 PSIA at Flow Transmitter

Intake Air Temperature: 77 ± 9 °F at inlet Barometric Pressure: 29.92 in. Hg ± 1 in. Hg

Humidity: NOx measurement corrected to 75 grains H2O/lb dry air

The NOx, HC, and CO emission data tabulated here were from a single engine under the test conditions shown above. These data are subjected to instrumentation and engine-to-engine variability. Field emission test data are not guaranteed to these levels. Actual field test results may vary due to test site conditions, installation, fuel specification, test procedures and instrumentation. Engine operation with excessive air intake or exhaust restriction beyond published maximum limit, or with improper maintenance, may results in elevated emission levels.
