Description

Carburetor heater kits are recommended for improved cold starting in locations where the temperatures falls below 0°C (32°F). Carburetor heaters prevent condensation and carburetor icing. The heater turns on when the temperature at the thermostat falls below approximately 4°C (40°F) and turns off when the temperature rises above approximately 16°C (60°F).

The carburetor heater for models 6VSG, 8.5RES, 12RES/RESL, and 14RESA/RESAL mounts between the engine air cleaner and the carburetor. The carburetor heater for models 8/10/12RESV/RESVL uses an adaptor (included) to mount on the carburetor. The carburetor heater for models 20RESA/RESAL, 20RESB, 20RESC/RESCL, and 20RESD fits into a threaded opening on the carburetor.

Carburetor heater kits are available in 120 volt or 240 volt versions.

Note: The heater requires a continuous source of AC power that is backed up by the generator set.
